Research Scientist at the intersection of AI and Physics

Work Experience

Perfomax **May 2026–present**
AI Advisor

- **AI Strategy & Platform Architecture** :
  - Advised on AI/ML strategy, product implementation, and technical design for the platform.

National University of Singapore **2022–present**
Postdoc under Kostya Novoselov

- **Leadership** :
  - Speaker search and selection for the 500-person AI4X 2025 conference.
  - Main organizer of the ICLR 2025 workshop on multiscale machine learning.
- **Transformer for generating symmetric crystals** :
  - Created a generative model for material design based on symmetry inductive bias.
  - Implemented the model in PyTorch.
  - Achieved the best generation quality and diversity among space-group-conditioned models.
  - Led a team of 6.

CERN [Yandex → HSE University] **2014–2022**
Researcher
2025 Breakthrough Prize in Fundamental Physics as a member of LHCb.

- **Generative models uncertainty estimation** :
  - Developed the first methods for estimating uncertainty of conditional GANs.
  - Led a team of 3 students.
- **Generative models for fast simulation** :
  - Developed a GAN-based machine learning model for high-fidelity simulation of a Cherenkov detector trained on tabular data.
  - Achieved approximately 10^5 speed-up compared to the ab-initio simulator.

Education

Higher School of Economics (HSE University) **2016–2020**
PhD in Computer Science, supervisor Andrey Ustyuzhanin; Machine Learning for particle identification in the LHCb detector.

Sapienza — Universita di Roma **2016–2020**
PhD in Physics (double degree with HSE), supervisor Barbara Sciascia.

Product Management course at Yandex **Spring 2018**
Focused coursework in product strategy and execution.

Yandex School of Data Analysis **2013–2015**
Master's level CS course covering algorithms, machine learning, deep learning, and distributed systems.

Moscow Institute of Physics and Technology
MS in Physics (2014–2016): Optimisation of data processing of the LHCb experiment.
BS in Physics (2010–2014): Study of the quantum states of the electrons in nonideal plasma and selected molecules using wave packet molecular dynamics with packet splitting.

Mentorship

- Mentored 9 students (1, 2, 3, 4, 5, 6, 7, 8, 9), 3 interns, and student workshop projects (1, 20).

- Student council member from 2013 to 2016, leading several dormitory-scale IT projects.
- Co-PI of a $3.4m AI Singapore grant on multiscale machine learning.

Teaching & Outreach

- Pitch research to the general public through major newspaper coverage (1, 2), blog posts (1, 2), a science slam, interviews (1, 2), and a public talk.
- Lecturer in the Coursera Advanced Machine Learning specialisation, which is award-winning.
- Delivered more than 20 conference talks.

Service

- Reviewer for RSC Advances, Machine Learning: Science and Technology, and AI for Accelerated Materials Design workshops at NeurIPS and ICLR (2023–2025).
- Peer Staff Supporter at NUS, serving as a first-line support for mental wellbeing.

Skills

ML & AI (Structured, non-text, domain-specific data) ·
Python (Research coding) ·
PyTorch (Deep learning) ·
Research Writing & Speaking ·
Leadership & Mentorship
