Research Scientist at the intersection of AI and Physics

WORK EXPERIENCE

CONSTRUCTOR GROUP *Machine Learning Consultant* 2021–present

NATIONAL UNIVERSITY OF SINGAPORE *Postdoc under [Kostya Novoselov](#)* 2022–present

Wyckoff Transformer, a generative model for materials [ICML 2025](#) · [GitHub](#)

- Developed a coordinate-free permutation-invariant autoregressive Transformer encoder model for material generation and property prediction based on symmetry inductive bias
- Increased materials discovery yield (S.U.N.) by 1.24x
- Cut inference to 0.05 GPU-ms/structure — 4 orders of magnitude faster than prior models
- Implemented the model in PyTorch; production-ready package published on [PyPI](#)
- Orchestrated large-scale (10k structures) DFT computations with VASP on an HPC cluster
- Led a team of 6

ML for defects in 2D crystals [npj 2D Mater. Appl.](#) · [npj Comput. Mater.](#) · [patent](#) · [GitHub](#)

- Conceived a novel sparse representation of crystals with defects
- Cut energy-prediction error 3.7× vs. the best prior model
- Optimised training and inference: 4x less memory, 8x fewer GPU operations
- Built a reproducible pipeline for parallel ML experiments
- Led a team of 3

⟨CERN | YANDEX → HSE UNIVERSITY⟩ *Researcher* 2014–2022

[2025 Breakthrough Prize in Fundamental Physics](#) as a member of LHCb.

Generative models for fast simulation [paper 1](#) · [paper 2](#) · [paper 3](#) · [code](#)

- Built a GAN for high-fidelity, tabular-data simulation of a Cherenkov detector
- Reached 10⁵× speed-up over the full Geant4 simulation

Machine learning on noisy data [paper 1](#) · [paper 2](#) · [code](#)

- Derived a statistically rigorous method to train classifiers on sPlot-weighted (label-noisy) data, standard in high-energy physics

Muon identification at the LHCb experiment at CERN [paper](#) · [poster](#) · [IDAO-2019](#)

- Solved a classification problem over tabular data with noisy labels under timing constraints
- Built a CatBoost model that cut the false-positive rate 30% in the critical low-momentum region
- Shipped the model into the LHCb trigger (C++ & Python)
- Packaged the work as a data science competition problem for IDAO-2019

EDUCATION

HSE University & Sapienza Università di Roma <i>PhD in Computer Science and Physics (Double Degree)</i> Supervisors: Andrey Ustyuzhanin & Barbara Sciascia Thesis: Machine Learning for particle identification in the LHCb detector	2016–2020
Product Management course at Yandex <i>Focused coursework in product strategy and execution.</i>	2018
Yandex School of Data Analysis <i>Master's-level CS programme</i> Algorithms, machine learning, deep learning, and distributed systems.	2013–2015
Moscow Institute of Physics and Technology <i>MS in Physics</i> Optimisation of data processing of the LHCb experiment.	2014–2016
<i>BS in Physics</i> Wave-packet molecular dynamics of electrons in nonideal plasma.	2010–2014
International Junior Science Olympiad (IJSO) Silver medal	Korea, 2008

MENTORSHIP

-
- Mentored 9 students ([1](#), [2](#), [3](#), [4](#), [5](#), [6](#), [7](#), [8](#), [9](#)), 3 interns, and student workshop projects ([1](#), [2](#)).

TEACHING & OUTREACH

-
- Pitch research to the general public through major newspaper coverage ([1](#), [2](#)), blog posts ([1](#), [2](#)), a [science slam](#), interviews ([1](#), [2](#)), and a public [talk](#).
 - Taught at the Machine Learning in High Energy Physics Summer School in [2015](#), [2016](#), [2017](#), [2018](#), [2019](#), [2020](#), [2021](#), and [2023](#).
 - Lecturer in the [award-winning](#) Coursera Advanced Machine Learning [specialisation](#)
 - Delivered more than 20 [conference talks](#).

SERVICE

-
- Reviewer for NeurIPS, RSC Advances, Machine Learning: Science and Technology, Digital Discovery
 - Peer Staff Supporter at NUS, serving as a first-line support for mental wellbeing.

SKILLS

- **Generative modelling for scientific data** – GANs, autoregressive transformers, and diffusion; from fast detector simulation to symmetry-aware crystal generation.
- **Uncertainty quantification** – built the first methods for estimating the uncertainty of conditional GANs; calibrated generative and discriminative models.
- **ML on structured, non-text data** – tabular, graph, and atomistic representations, spanning gradient boosting to transformers.
- **Inference and systems at scale** – C++ production integration, large-scale DFT/VASP on HPC clusters, and reproducible experiment pipelines.
- **Physics domain depth** – high-energy and condensed-matter physics; first-principles intuition that shapes model design.
- **Research leadership** – lead multidisciplinary teams, chair conferences, and mentor students from idea to publication.

PRESENTING AT ICML 2026

July 11, 12:15–13:30 – Nikita Kazeev and Ian Babich. [“Foresight-Phys: A Benchmark for Forecasting the Results of Physical Experiments”](#). In: *Forecasting as a New Frontier of Intelligence Workshop at ICML 2026*.

July 11, 10:50–11:50 & 15:55–16:55 – Artem Dembitskiy*, Shuya Yamazaki*, Artem Maevskiy*, **Nikita Kazeev***, Roman A. Eremin, Semen Budennyi, Kedar Hippalgaonkar, Antonio Helio Castro Neto, and Andrey E. Ustyuzhanin. [“Generative Pipeline for Discovering Solid-State Battery Materials with Universal Atomistic Potentials”](#). In: *AI for Science Workshop at ICML 2026*. *Equal Contribution.
